Proposal: 4.3

* Less than 0.05

** Insufficient data

(1) The proposal would limit the federal income tax value of specified deductions or exclusions from taxable income. This limitation would reduce the value of these deductions and exclusions otherwise lowering taxable income in the 28-percent, 33-percent, 35-percent, or 39.6-percent tax brackets under the current law to 25 percent. A similar limitation would apply under the alternative minimum tax as well. In addition, the proposal would introduce a non-refundable tax credit to potentially increase the tax value of these deductions and exclusions otherwise lowering taxable income in the 10-percent and 15-percent tax brackets to 25 percent. This credit would be an alternative to the existing Retirement Savings Contributions Credit. The income deductions and exclusions limited by this provision would include individual and employer contributions to Individual Retirement Arrangements and defined contribution retirement plans. The proposal would be effective for taxable years beginning after December 31, 2015.

<http://www.taxpolicycenter.org/taxtopics/Baseline-Definitions.cfm>

(2) Includes both filing and non-filing units but excludes those that are dependents of other tax units. Tax units with negative adjusted gross income are excluded from their respective income class but are included in the totals. For a description of expanded cash income, see

<http://www.taxpolicycenter.org/TaxModel/income.cfm>

(3) Includes tax units with a change in federal tax burden of \$10 or more in absolute value.

(4) After-tax income is expanded cash income less: individual income tax net of refundable credits; corporate income tax; payroll taxes (Social Security and Medicare); estate taxes; and excise taxes.

(5) Average federal tax (includes individual and corporate income tax, payroll taxes for Social Security and Medicare, the estate tax, and excise taxes) as a percentage of average expanded cash income.

(1) The proposal would limit the federal income tax value of specified deductions or exclusions from taxable income. This limitation would reduce the value of these deductions and exclusions otherwise lowering taxable income in the 28-percent, 33-percent, 35-percent, or 39.6-percent tax brackets under the current law to 25 percent. A similar limitation would apply under the alternative minimum tax as well. In addition, the proposal would introduce a non-refundable tax credit to potentially increase the tax value of these deductions and exclusions otherwise lowering taxable income in the 10-percent and 15-percent tax brackets to 25 percent. This credit would be an alternative to the existing Retirement Savings Contributions Credit. The income deductions and exclusions limited by this provision would include individual and employer contributions to Individual Retirement Arrangements and defined contribution retirement plans. The proposal would be effective for taxable years beginning after December 31, 2015.

<http://www.taxpolicycenter.org/taxtopics/Baseline-Definitions.cfm>

(2) Includes both filing and non-filing units but excludes those that are dependents of other tax units. Tax units with negative adjusted gross income are excluded from their respective income class but are included in the totals. For a description of expanded cash income, see

<http://www.taxpolicycenter.org/TaxModel/income.cfm>

(3) Includes tax units with a change in federal tax burden of \$10 or more in absolute value.

(4) After-tax income is expanded cash income less: individual income tax net of refundable credits; corporate income tax; payroll taxes (Social Security and Medicare); estate tax; and excise taxes.

(5) Average federal tax (includes individual and corporate income tax, payroll taxes for Social Security and Medicare, the estate tax, and excise taxes) as a percentage of average expanded cash income.
